

CHANGING THE RIBBON

When ordering ribbon, please specify Travel-riter spooling (core-type), ½ inch width by 10 yards length, single color.

1. Remove top cover (17).
2. Move Auxiliary Ribbon Reverse (26) to its left position.
3. Wind all the ribbon onto RIGHT spool. (Turn spool by placing finger on top of spool cover.)
4. Press down Left Shift Lock Key (24) and disengage ribbon from Vibrator (A).
5. Remove spool-tops; swing ribbon lugs away from spool. Lift ribbon from slot in left spool. Lift metal core, with old ribbon, from right spool and discard.
6. To replace the ribbon, swing spool lugs out from posts. Place metal core with new ribbon on right spool, making certain that ribbon unwinds from back of spool.
7. Place end of ribbon with metal tip into slot on left spool.
8. Place ribbon through slots in writing line guide (B) and through Ribbon Vibrator (A).
9. Replace tops on spools. Replace top cover and you are ready to type.

GENERAL CARE OF YOUR REMINGTON TRAVEL-RITER PORTABLE TYPEWRITER

Reasonable care on your part will insure years of satisfactory performance from your typewriter. A typewriter's principle enemy is dust. Keep your typewriter covered when not in use. Clean the typefaces occasionally with a brush to remove accumulated lint and ink.

Do not clean your typewriter's surface with alcohol as it is injurious to the finish.

Once in a while you may put a drop or two of oil on each of the two rails on which the carriage moves and then rub it off again. Never attempt to oil the type-

bars or any other part of the mechanism as this may have a tendency to gum and clog the working parts.

Your Remington Portable was carefully inspected before it was delivered to you. If it ever does need adjustment or repair, take it to the nearest Remington Rand Typewriter Service Station or to an authorized Remington Rand Dealer where trained servicemen will give it expert attention.

You will find that if you take good care of your Remington it will repay you with years of faithful service.

Remington Rand DEALER SALES

DIVISION OF SPERRY RAND CORPORATION

NEW YORK 10, NEW YORK

TO REMOVE MACHINE FROM CASE

Note the two clamp levers attached to the bottom of case at sides of machine (ARROWS). Merely hold down these levers with the thumbs. Simultaneously raise the front of the machine with the fingers, lift the machine forward and out of the case.

TO RELEASE CARRIAGE

Simply flick the Carriage Centering Lever (ARROW) UP to disengage the carriage. Carriage is now free to move. To LOCK CARRIAGE, press Carriage Centering and Locking Lever DOWN and center the carriage by moving forward the Carriage Release Lever (3).

TO REPLACE MACHINE IN CASE

Note lug attached to case at rear (ARROW). To replace the machine, position the typewriter so that this lug engages the metal slot attached to the underside of the machine. Then, lower the machine into the case until the two clamp levers, at the front of the case, snap shut. **IMPORTANT** - BEFORE CLOSING COVER OF CASE, BE SURE TO CENTER AND LOCK CARRIAGE WITH CENTERING AND LOCKING LEVER.

INSERTING THE PAPER

Insert paper behind platen, holding paper with left hand while turning right cylinder knob. When paper appears at front of platen, place paper bail (13) onto paper. (Twin rollers on paper bail should be positioned to divide paper in thirds for best results.)

ADJUSTING THE PAPER

If necessary, the paper may be adjusted by moving forward the Paper Release Lever (15), and lifting bail to its upright position. Paper is then free for adjustment. When paper is adjusted, return Paper Release Lever and paper bail to their original positions.

MARGIN SETTINGS

To set your margins, press downward on the left hand Adjustable Margin (ARROW) and move to the point on the Paper Table Scale where the writing line is to begin. Then, press downward on the right hand Adjustable Margin (ARROW) and move to the point where the writing line is to end. Your margins are set. To change, repeat the operation.

PRINCIPAL

OPERATING FEATURES

1. Sturdy carriage return and line space lever.
2. Left and right cylinder knobs.
3. Left and right carriage release levers.
4. Line finder for typing out of regular spacing.
5. Single and double line space selector.
